

Task 3 – Motion Cut

Single Product Page

Description:

1. The task 3 at motioncut was single product page which we have to build using HTML , CSS .
2. For this task I have chosen a headset and I have created many sections to explain it clearly.
3. First when u enter the page you will be able to see the name of the product it's price and picture.
4. I have added a section called "Details" to explain in detail about the product specification and details.
5. If you click on the button a pop up will be displayed on the screen which gives more details about the product.
6. You can click on the cancel or to come out of the pop up when will lead us to the main page.
7. I have also added a add to cart option in my page.
8. I have used HTML properties for the structure of the page and CSS properties such as background-color , font ,margin , etc.. to make it visually appealing.
9. I have made use of "meta" which will make my page Responsive i.e.. it will adapt according to the screen size.
